CONCRETE SELF LOADING MIXER

SELF LOADING CONCRETE MIXER IS A BEST CHOICE FOR CONTRACTORS WHEN THAY MEET THIS THING:

- Works too far away from concrete batching plant.

- Works in terrain is complicated or costly when installing a new concrete station.

- Concrete works scattered on a long distance, terrain difficult to travel.

- Grade-level concrete works in tunnels, steep slopes, which can not be moved.

- Insufficient or unmanageable labor when mixing concrete by hand.

Solving these difficulties is the great strength of a self-loading concrete mixer by the mechanical combination of a concrete batching plant and a concrete transport truck. Special features of self-loading concrete mixer:

- There are many types of vehicles with different mixing capacity from 1 m3 to 5,5m3 corresponding to Carmix One, Carmix 2.5 TT, Car Mix 3.5 TT, Carmix 5.5TT.

- The mixing bowl can be rotated 300 degrees to easily pour concrete in all four directions.

- Carbin steering can be rotated 180 degrees to control feed and mix and control as a conventional truck transport.

- Hydraulic steering makes the car easy to control and powerful when traveling on complex terrain.

- Electronic Load Cells help to control the quality of concrete similar to a commercial concrete production station.
